

Student-1: A BOLD NEW APPROACH TO IMPLEMENTING SYSTEMS WITH COMPLEX PROCESS AND DISPARATE DATA OF ANY FORM

With the introduction of Student-1, FolderWave has created an Internet generation process environment that simplifies the critical paper and process intensive activity that defines the Enrollment process. Through breakthrough technology and services your organization can see improved effectiveness and efficiency in **Admissions, Financial Aid, Housing, and Health Services**.

Traditionally these areas have been separate with, at best, limited information integration. Admissions had their record for the student, and Financial Aid had another record. By creating synergy in these areas from a process perspective, information can flow from one organization to another, transparently and effectively.

The Admissions module will support the tracking and management of the information critical to the evaluation of candidates. By providing online access to the admission data and documents several professionals can be involved in a collaborative effort for review. Critical data from the documents can be maintained in the repository for reporting on the applicant pool and for actions during processing, like routing the application to the proper professional.

The Financial Aid module will allow your counselors to review online application for aid and begin the process of verification much earlier in the cycle. Combined with admission information and data from the financial aid documents, the financial aid counselors will have everything they need to process the applicant quickly and efficiently. By applying algorithms to the data, alerts can be presented to the counselor guiding their workflow. Routing rules can govern the process regardless of your institutions business rules.

Wrapping up the solution with Housing and Health services your students can move from acceptance to award to the classroom more efficiently than ever. The result is a complete student electronic folder combining all the material from enrollment in one place and secured so only the right people can access the information.

FolderWave's Student-1 provides a modular approach to moving through the Enrollment Process. With Admissions, Financial Aid, Housing and Health Services modules you can implement as fast as you like. FolderWave's applications and business models can scale up to large institutions and scale down to support secondary and post-secondary private institutions.

So start with Student-1 and look forward to new applications from FolderWave in the future to address other areas such as Grant and Loan Administration, Contracts and Trustee Documents, and Accounts Payable.
